The Rotten Financial System/Rot\$

The world is bankrupt / It's run on debt

The central banks control the world's economy. They do this by creating debt. The central banks R private banks. The US federal bank is one, the bank of England another, they R organised by the Bank for International Settlements (BIS) in Zurich. We call these banks the Faceless Evil. The central banks print money – by pressing buttons. They create virtual money out of nothing. They R the source of all loans. The Faceless Evil prefers it if the loans R never repaid because what it wants is the interest – which accumulates out of all proportion to reality. This means it always has too much money to lend to investors & it doesn't have to print virtual money except in an emergency.

In practise, what happens is massive waste of real wealth so that 1% can syphon off the profit. The total of this profit is not even 100th part of the waste. The 1% R the Faceless Evil, the Motherfuckers like Shell & Monsanto, govts, tech giants, media moguls & investors. But all profit eventually goes to the Faceless Evil because they own the debt. This vicious spiral is subsidised by the work of the taxpayer, the poor get poorer & the rich get fewer as the riches of the earth get squandered. Rot\$ causes climate change, the solution is the free world economy.
